

# Centrifuge

The worlds first 5ml microcentrifuge

This Mini Centrifuge is a benchtop centrifuge that is ideal for quick spin downs, microfiltration of HPLC samples and cell separations. It comes complete with a variety of rotors and features two operating speeds, three spin modes, and three choices of LED light colours. This is currently the only mini centrifuge on the market that accommodates 1.5ml and 5ml microtubes. With large centrifuge features packed into a personal benchtop unit, this is a cost-effective solution for laboratories on a budget.

LED colours to choose from
